Fundarem.

The software built to make EU companies agentic

The problem: Most SMEs aren't using AI yet

Companies that use AI

SMEs **17 in 100**

Large companies **55 in 100**

Companies in the EU with 10 or more staff, 2025

Why those who looked at AI held back

7 in 10
lack the skills to set it up

1 in 2
are unsure about the legal consequences

Nearly 1 in 2
fear a leak of customer or staff data

Source: Eurostat, use of AI in enterprises, 2025.

Four things stand between your business and AI

There are four walls that limit your company from utilizing the full potential of AI

1

Missing integrations

No connector

Most of the software systems you use today, lack the integration to AI

2

No map of the business

No relationship

AI does not understand your business, as the data is unstructured and unrelated

3

Regulation

EU law

GDPR, the AI Act, NIS2 and limits on data leaving the EU or processed by AI

4

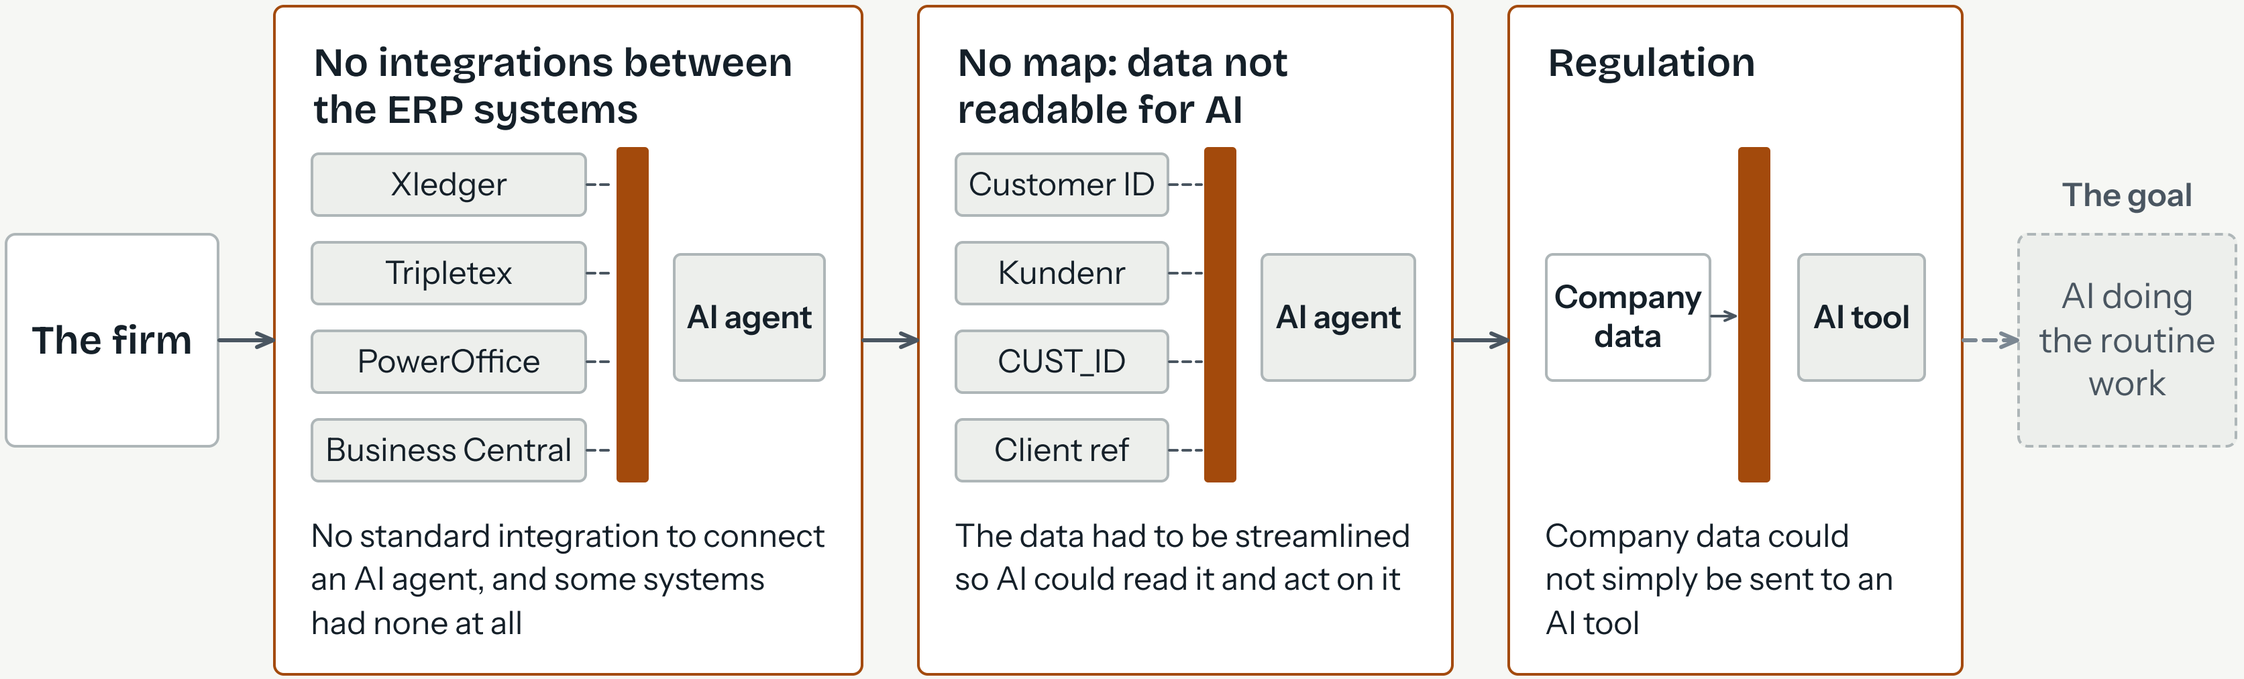

Model cost and control

Frontier models

Costly at scale, without efficient use or cost control. No ownership of your data

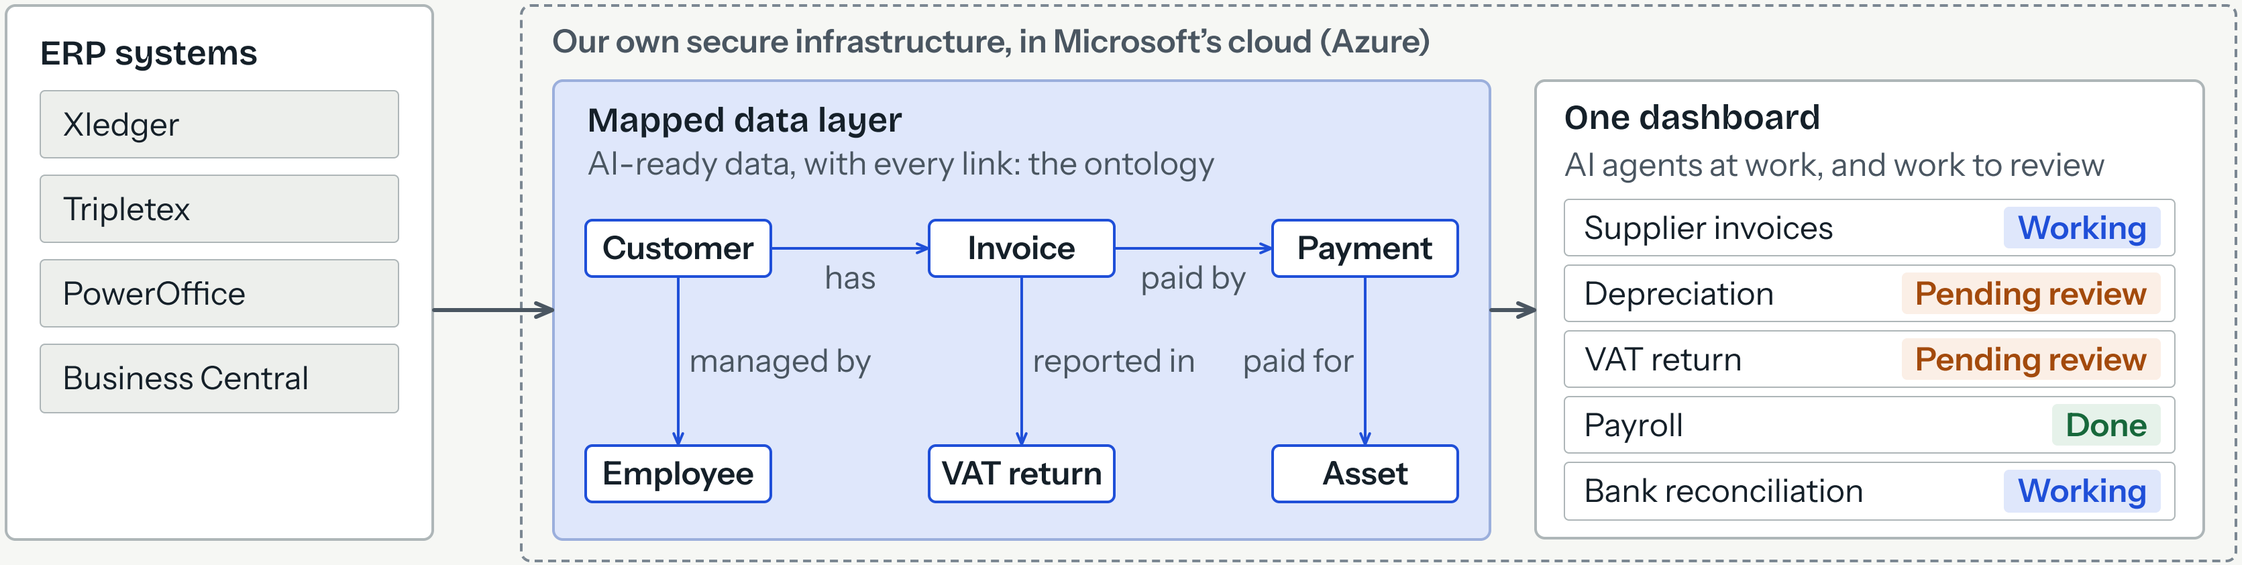

We encountered the same problem in our previous job

One of Norway's three largest accounting firms wanted to utilize the potential in AI.
But, the clients ERP systems lacked integrations, the data was not streamlined so AI could understand it, and regulatory boundaries made it difficult to use frontier models like Claude or ChatGPT.

How we solved the problem

We custom-integrated and joined the firm's ERP systems into one mapped data layer, into one common platform. Through agents and a personal AI assistant, each employee could use the full potential of AI, that fully understood the business process. It all ran securely inside the company's own IT infrastructure, tested by the company's security experts.

- ✓ AI ran inside Microsoft's cloud, in our infrastructure
- ✓ Personal data masked before processing
- ✓ Compliant, with a DPIA in place

Over 40%

of the time saved on accounting work in general

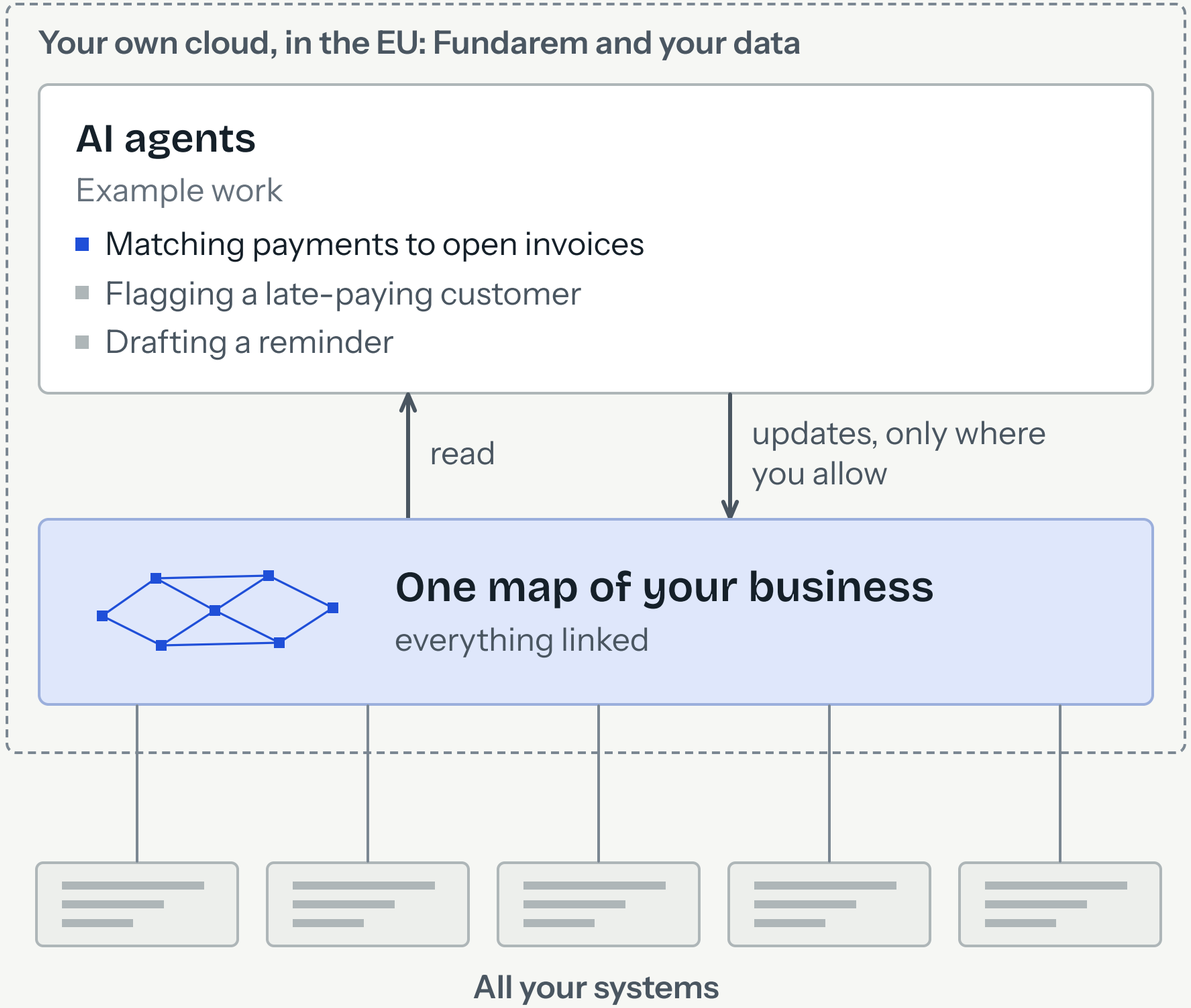

From that, we built Fundarem

One system that enables AI on all your data, while staying compliant.

Fundarem is a software solution that **runs in your own IT infrastructure**. Connecting your data from various sources and systems, then mapping them so that they become understandable for AI.

By enabling AI models that processes within Microsoft, your data never leaves your environment, letting you stay compliant.

- ✓ Connects all your systems by creating integrations
- ✓ Maps the data so that AI understands your business
- ✓ Your data never leaves your IT infrastructure
- ✓ Keeping you compliant with the law

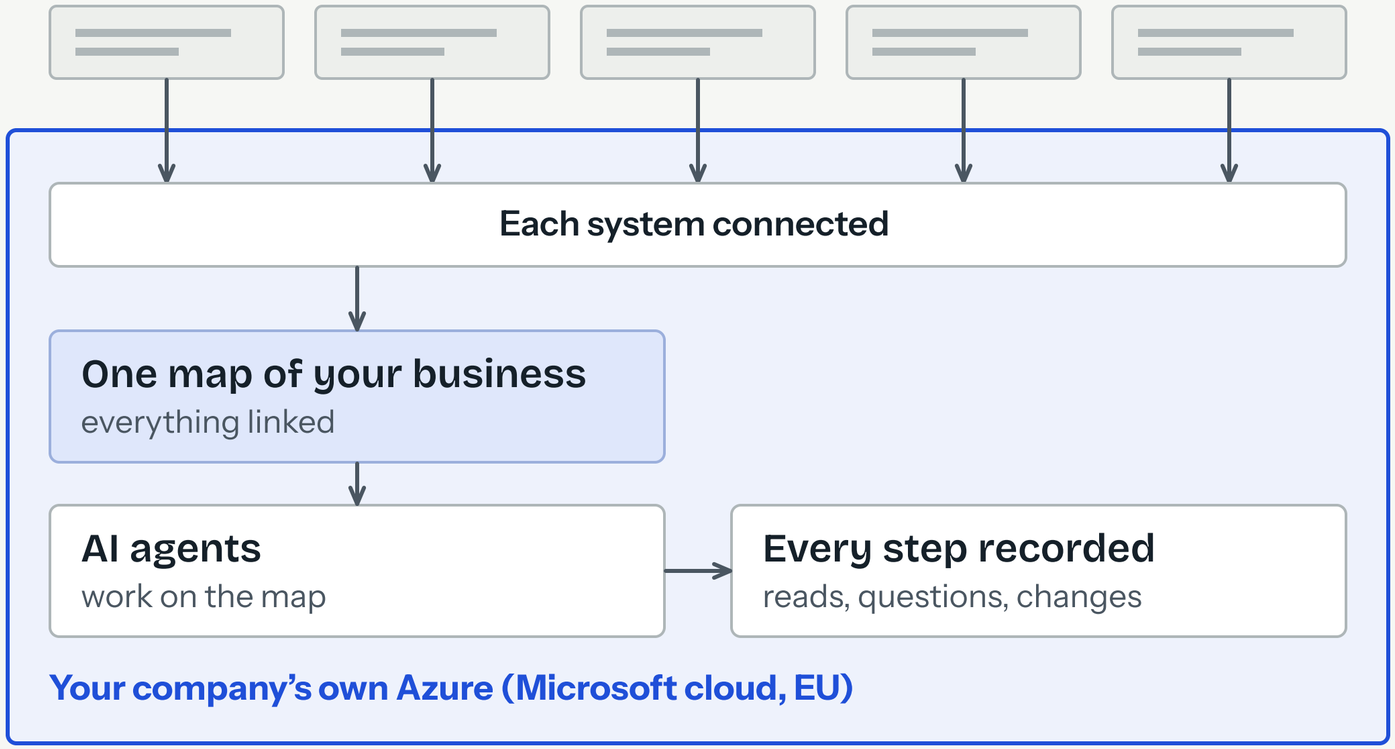

How Fundarem works

The whole setup is built in **your company's own Azure**, in Microsoft's cloud in the EU, so your data stays safe.

- ✓ Runs in an EU region you choose
- ✓ Personal data masked before each AI call
- ✓ Nothing written back until you or a rule you set approves it

1. Fundarem builds itself up inside your IT environment
2. Fundarem connects to the systems you use today through connectors
3. Everything joins into one map of the business
4. AI agents work on the map and understands the business
5. One application to work in, instead of many systems

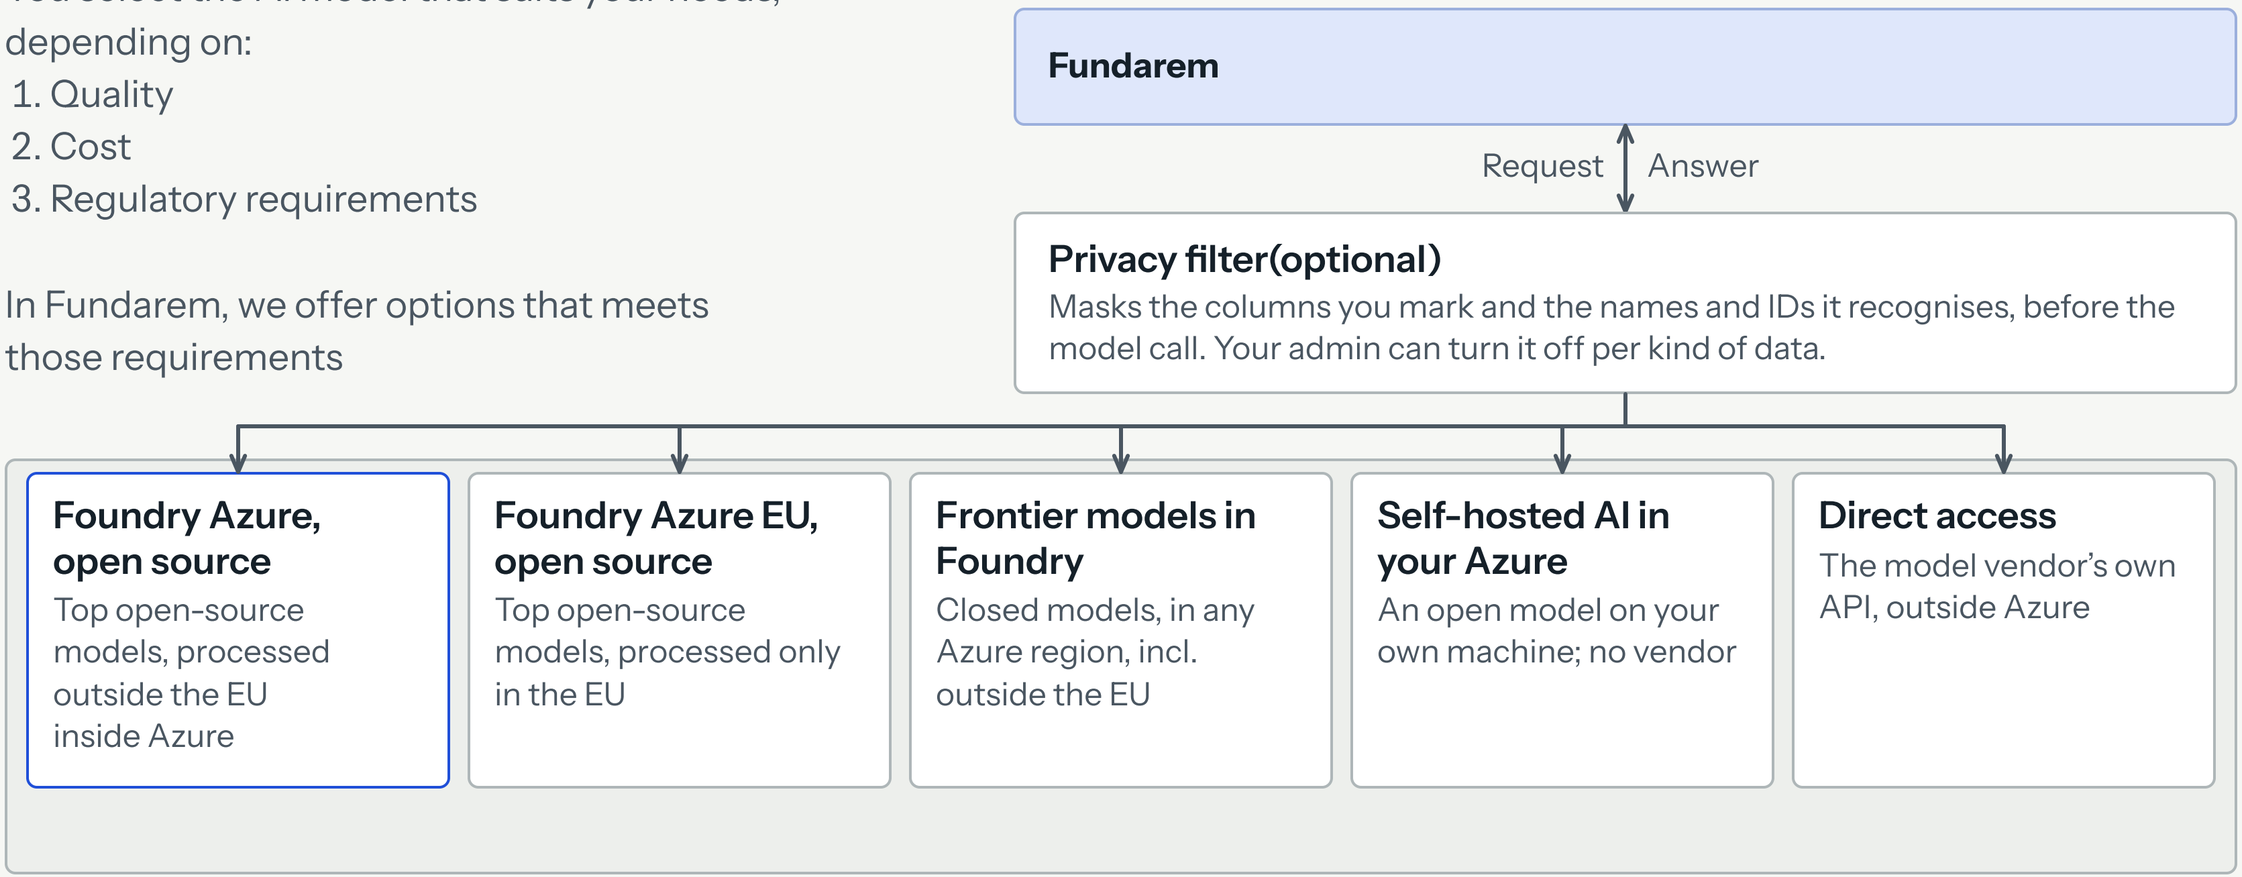

In Fundarem, you select the AI models that suits your need

You select the AI model that suits your needs, depending on:

1. Quality
2. Cost
3. Regulatory requirements

In Fundarem, we offer options that meets those requirements

Select the model that fits within your regulatory requirements, costs and quality requirements.

	Foundry Azure, open source	Foundry Azure EU, open source	Frontier models in Foundry	Self-hosted VM in your Azure	Direct access
Compliance					
GDPR use	✓ With a DPIA and a transfer safeguard	✓ With a DPIA	✓ With a DPIA and a transfer safeguard	✓ With a DPIA	✓ With a DPIA and a transfer safeguard
EU processing	✗ No, outside the EU	✓ Only within the EU	✗ No, outside the EU	✓ Your Azure region	✗ No, outside the EU
Who processes it	Microsoft	Microsoft	Microsoft or the vendor, inside Azure	Your own machine; no model vendor	The model vendor, outside Azure
Anonymiser	✓ On by default	✓ On by default	✓ On by default	✓ On by default	✓ On by default
DPIA template	✓ Supplied; review it: outside the EU	✓ Supplied; no transfer check	✓ Supplied; review it: outside the EU	✓ Supplied; no transfer check	✓ Supplied; review it: outside the EU
Cost					
How you pay	Per token, on your Azure invoice	Per token, on your Azure invoice	Per token, on your Azure invoice	Per hour for your own GPU machine	Per token, billed by the model's vendor
Average, USD per 1M tokens	1.32 in / 5.65 out	0.38 in / 1.11 out	5.33 in / 25.33 out	From about 3,486 USD a month, used or not	5.00 in / 25.00 out

Model ability	High: the best open weights on the indexes	Below the default on shared scores	Highest: ahead of the default on the indexes	High: the best open weights on the indexes	The highest quality

Your company's DPIA makes the decision; Fundarem does not certify compliance. Full table on fundarem.com

This is what you get with Fundarem

Fundarem in short

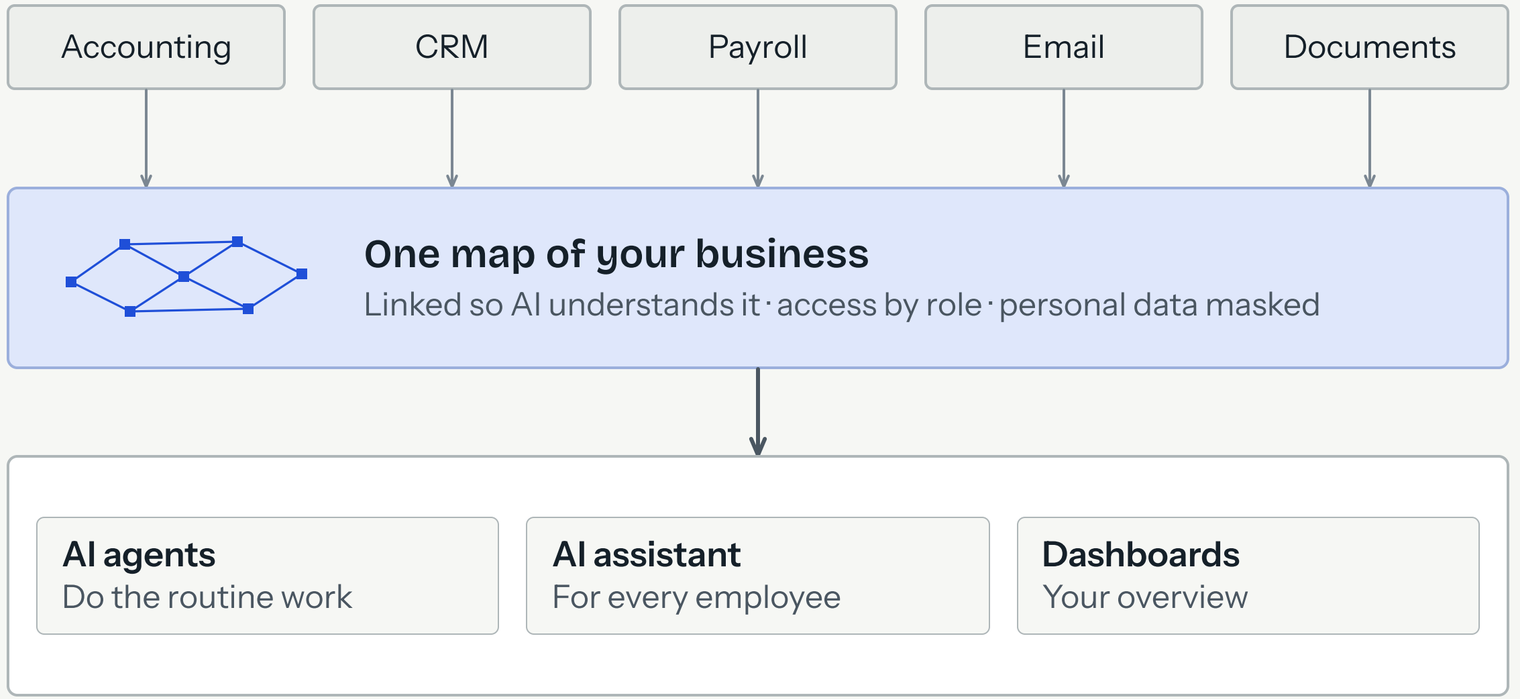

1 Software in your IT environment

Runs in your company's own cloud, in an EU region

2 All your systems connected

3 Your data secured and AI enabled

4 One platform to work in

With Fundarem, it’s built for the law from the start

Your data stays yours, and a written contract says how we may handle it. The privacy paperwork comes pre-filled; you complete and sign it. Fundarem is built to help you comply with GDPR and the EU AI Act; the final sign-off is always yours.

1 ✓
Company data

- ✓ Stored in your own cloud, in the EU

2 ✓
Sent to an AI tool

- ✓ Personal details the filter recognises are masked first

3 ✓
Handled in another country

- ✓ Your choice: keep it all in the EU

4 ✓
Who is responsible?

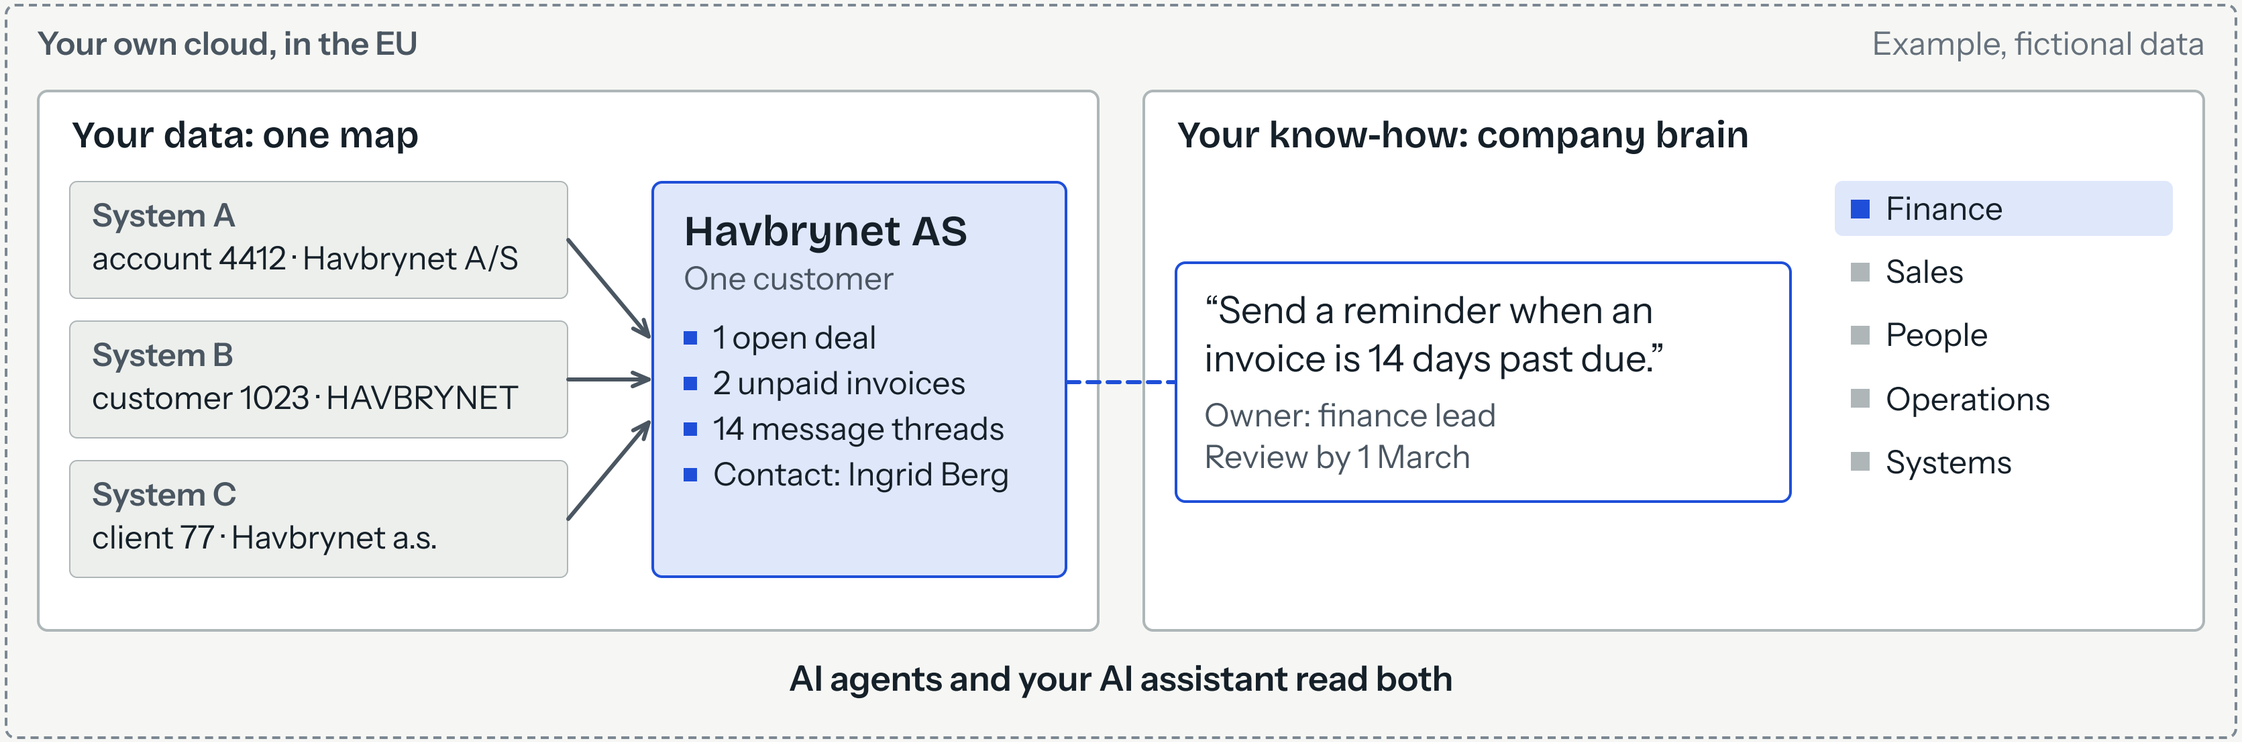

- ✓ You stay in charge: every step is recorded, in your own cloud

The paperwork comes ready

Privacy check (DPIA), pre-filled | Data contract | Who else handles your data | AI law check | The rules for 15 countries

With Fundarem, your company gets its own "brain"

The map holds your data: one customer, not three records in three systems. The company brain holds how you work: your rules, your words and who is in charge of what. AI agents and your assistant read both.

With Fundarem, you get digital colleagues

Pick an AI agent from our list. It starts at set times, when something changes, or when you ask. It looks across all your systems, prepares the work, and only changes things where you allow. **You can also create your own**

An AI agent at work

Example, fictional data

Starts

- Every morning
- When something changes
- When asked

→

Looks across your systems

Customer	**Tindrevik Bygg AS**
Overdue invoice	**kr 48 312**
Open deal	**kr 450 000**

→

Prepares

"Friendly reminder: invoice 1187 is 14 days past due." A gentle tone, since a deal is open.

→

Saved, where you allow

Reminder noted on the customer

Agent examples

Invoice chaser

Drafts reminders for late invoices

Inbox sorter

Turns new messages into tasks

Meeting follow-up

Writes the note after a meeting

Quiet-deal checker

Flags deals that went quiet

With Fundarem, every employee gets a copilot

Working as a highly skilled and capable copilot. Ask in plain words and get one answer from all your data, not one system at a time. It knows how your company works, how data is connected and is limited to the role of every employee.

Managing director's assistant

Which customers are behind on payments this month?

Three customers have overdue invoices:

Tindrevik Bygg AS	**kr 48 312**
Solvangberg Design	**kr 21 900**
Lysmyra & Sønner	**kr 9 450**

Tindrevik also has an open deal worth kr 450 000. Shall I draft a friendly reminder to each of them?

It can also propose changes for you to approve, and run longer jobs for you

Capabilities

Reads your data
Across all your systems, within your role

Writes to your data
Updates records once you approve

Creates files
Reports, spreadsheets and letters

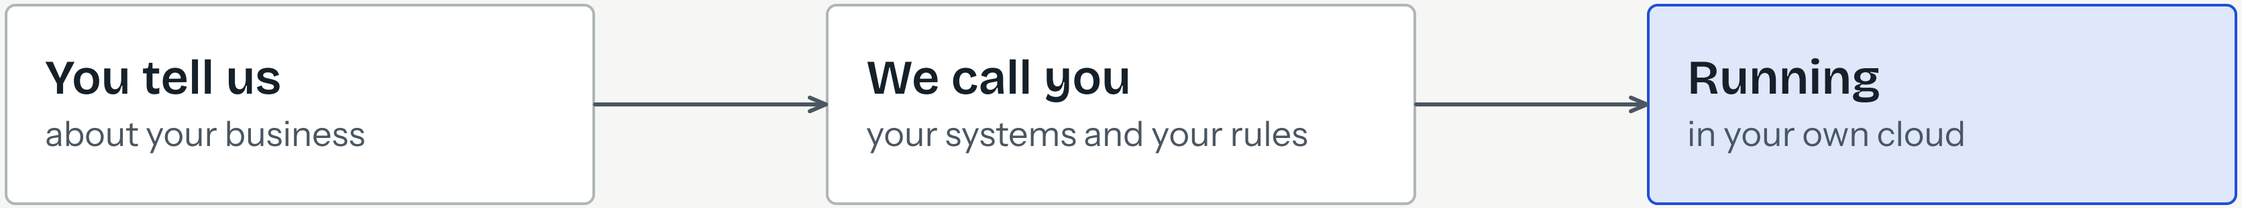

Schedules agents
Runs an AI agent weekly or on a change

Drafts messages
Emails and reminders, ready for you to send

Runs longer jobs
Runs in the background and reports back

If Fundarem is for you, let's get started

Fill in the short form: it takes a minute. We call you and talk through the systems you use and the rules you must follow. We agree the contract, and you choose who sets it up in your company's own Azure.
